

Software Development Engineer

*JUSPAY is a pioneering fintech company dedicated to providing secure, efficient, and seamless payment solutions. Our technology processes over **125M** transactions daily with an annualized Total Payment Volume (TPV) of **\$500 billion**. Juspay has revolutionized the digital payment landscape with over **1.5 billion** apps installed with Juspay SDKs.*

99.99% Availability | 125Mn+ Txns/day | 1-Click Experience

What you'll be doing?

You'll be working on the core problems pertaining to our centers of excellence. Each of our Centres of Excellence balance the dual of Framework Development (The Ideal) and Business Enablement (The Practical)

- 1. SDK: Building UI/UX experiences that enable frictionless user payments and enable merchants to manage payment options seamlessly.*
 - Frictionless 1-Click Payment with Native payment page*
 - Incorporating React Markups in 'Presto' (proprietary UI framework)*
- 2. Backend: Business Logic to handle evolving payment requirements (UPI, Integrations, Authentication) flexibly*
 - Biggest FP company with entire business logic in FP*
 - Concise Expression of complex Payment Logic*
 - API Integrations*
- 3. Data Science: Intelligence from more than a billion transactions to enable automated and intelligent payment operations*
 - Intelligent traffic routing*
 - Self-Healing systems*
 - Automatic Anomaly Detection*
 - Intelligent Payment Assist*
 - AI-powered Payment Operations*
 - Aesthetic Visualization of Data*
- 4. Infrastructure: Reliable and 99.999% Available infrastructure which can power the payments for India.*
 - Multi-DC Architecture*
 - Infrastructure DSL for unified management at scale*

- Distributed computing in Edge devices

Apply if you are:

- *Enthusiastic about architecting expensive framework using deep functional programming languages*
- *Interested to solve reliability & performance problems which occur with large scale*
- *Passionate about developing low code & no code platforms whiten a framework to streamline & accelerate application development*
- *Empowered to incorporate self service, features in application development, enabling end users to efficiently modify and customize their applications as needed*
- *Excited about managing merchants (big & small) with zero issues*

What's in it for you?

Welcome to Day0!

- *You will hit the ground running with the focus on mission-critical projects & the development of the next generation frameworks*
- *Working on challenging problems which will put you to your best*
- *Dive into a development journey anchored in first principles thinking & progress into a skilled system architect, inspired by the growth of our DUI/Hyper SDK team*
- *Learn from the best, unleashing your potential for ten fold growth*
